DAY-9

BLOCK-1 : Aptitude.

1.) A can complete a work in 10 days and B in 15 days. How many days will they take together?

Solu:

$A = 10$ Days $\Rightarrow \frac{1}{10}$

$B = 15$ days $\Rightarrow \frac{1}{15}$

$A + B = \frac{1}{10} + \frac{1}{15} = \frac{(3+2)}{30} = \frac{\cancel{5}^{1}}{\cancel{30}_{6}}$

$A + B = \frac{1}{6}$

A and B together = 6 days.

2.) A alone can do a work in 12 days. After working for a 4 days, B joins and work finishes in 4 more days.

Solu:- $A = 12$ days $\Rightarrow \frac{1}{12}$

After work = 4 days $\Rightarrow \frac{\cancel{4}^{1}}{\cancel{12}_{3}} = \frac{1}{3}$.

Remaining work $= 1 - \frac{1}{3} = \frac{2}{3}$

$(A+B) = \frac{2}{3}$ in 4 days.

$= \left(\frac{2}{3}\right)/4 \Rightarrow \frac{\cancel{2}^{1}}{3} \times \frac{1}{\cancel{4}_{2}}$

$= \frac{1}{6}$.

Scanned with OKEN Scanner

$A + B = \frac{1}{6}$

$A = \frac{1}{12}$

$B = \left(\frac{1}{6} - \frac{1}{12}\right) = \frac{1}{12}$

$B = 12$ days.

3.) If 5 people can complete a work in 20 days, how many people are needed to complete the work in 10 days?

Soln:-

5 people = 20 days.

Work = $5 \times 20 = 100$

Req People = $\frac{10\cancel{0}}{1\cancel{0}} = 10$ people.

4.) A is twice as efficient as B. If B takes 12 days to complete work, how many days will A take?

Soln:- $A = 2B$.

$B = 12$ days $\Rightarrow \frac{1}{12}$

$A = \cancel{2}\left(\frac{1}{\cancel{12}_{6}}\right) = \frac{1}{6}$.

$A = 6$ days.

5.) Pipe A fills a tank in 6 hours and Pipe B fills in 8 hours. How long will both take together?

Solu

$A = 6\,hr \Rightarrow \frac{1}{6}$

$B = 8\,hr \Rightarrow \frac{1}{8}$

$A + B = \frac{1}{6} + \frac{1}{8} = \frac{4+3}{24} = \frac{7}{24}$

Time $= \frac{24}{7}$ hours.

$= 3.42$ hours.

$$\begin{array}{r} 3.42 \\ 7\overline{)24} \\ 21 \\ \hline 30 \\ 28 \\ \hline 20 \\ 17 \\ \hline 3 \end{array}$$

BLOCK - 2 : Verbal Ability

Reading Passage :

1.) What is an Algorithm?

An algorithm is a step-by-step process used to solve a problem.

2.) Why are efficient algorithms important?

It save time and memory.

3.) What do algorithms help reduce?

Time complexity and memory usage.

Grammar correction:-

1.) She don't like programming.

She doesn't like programming.

2.) He have written the code.

He has written the code.

3.) They is working on algorithm.

They are working on algorithm.

BLOCK-3: communication Practice:-

Explain what happens when you run a program.

We run a program, the computer follows a few steps.

First of all, ~~It~~ is compilation or interpretation. In some programming languages, the code is compiled into machine code. Next is memory allocation. The system stored variables and Data in RAM so the program can run smoothly. Then comes execution. The CPU processes the instructions step by step and performs operations. Finally, we got the output. The result is shown on the screen or stored in a file.
