DAY-7

BLOCK-1 : Aptitude

1.) What is the probability of getting a head when tossing a coin?

Solu:

1 coin = {H, T} = 2.

Head = 1

$= \frac{1}{2}$ Probability

2.) What is the probability of getting a number greater than 4 when rolling a dice?

Solu:

Dice = {1, 2, 3, 4, 5, 6} = 6

Num. = 4 => 5, 6 = 2.

$\frac{2}{6} = \frac{1}{3}$ Probability

3.) A bag contains 3 red balls and 2 blue balls. Find probability of picking a red ball

Solu:

3 red + 2 blue = 5 balls.

Probability of red = 3

$= \frac{3}{5}$

4.) If two coins are tossed, what is probability of getting two heads

Solu.

2 coins = {HH, HT, TH, TT} = 4

2 heads = {HH} = 1

$= \frac{1}{4}$ probability //

5.) Probability of selecting a vowel from the word "ENGINEER".

Solu.

ENGINEER - 8 Letters.

vowel = E, I, E, E = 4 letters.

$= \frac{\cancel{4}}{\cancel{8}2} = \frac{1}{2}$ probability //

BLOCK-2 : Verbal Ability

Reading Passage:

1.) What is the main role of an operating system?

It manage hardware and provide services for computer programs.

Scanned with OKEN Scanner

2.) Why is memory management important?

Solu:-

To ensures efficient use of memory and better system performance.

3.) What is process scheduling?

Solu:-

It decides which process runs at what time in the CPU.

Grammar Corrections:-

1.) He don't know operating systems.

He doesn't know operating system.

2.) She were learning data structures.

She was learning data structures

3.) They has solved the problem.

They have solved the problem.

BLOCK-3: Communication Practice

Explain how the Internet work

The internet is very useful in our daily life. We use the internet, everything happens very fast behind the scenes. When we type a URL in the browser, it goes to the DNS, which stands for Domain Name System. The request is sent to the server where the website is stored. The server processes the request and sends back the response. It includes the webpage data like text, images, and videos. The browser displays the webpages on our screen.
